PROTECT WHAT YOU SEND

TRUST WHAT YOU RECEIVE

Trustifi

Ensuring your organization avoids malicious inbound emails is like dodging bullets...
If you are not protected with the Trustifi Inbound Shield

The Average Employee Receives
16
Malicious Emails Per Month*
*Symantec's 2018 Internet Security Threat Report (ISTR)

If you have 100 employees, your company needs to avoid
19,200
Malicious attacks annually

INBOUND SHIELD PROTECTS AGAINST:
Phishing, Malicious Links, Malicious Files, Viruses, Spoofing, Advanced Persistent Threats, Zero-Day Attacks, Malware, Ransomware, Spam and more...

HOW IT WORKS
Inbound traffic is scanned in real-time through sophisticated multi-layered detection engines using Trustifi's proprietary next-gen technology:

- **Sandboxing:** Detonates malicious content outside of your network
- **Web Scraping:** Deep page and URL scanning for malicious content
- **Black Listing:** Integrated with the world's largest black list
- **Machine Learning:** Proprietary algorithms detect, protect and prevent users from unknown threats

EASE OF USE:
Users can easily see the "Status" of inbound emails indicating when they are "Safe" or not.

Threat Protection
Spoofing Attack ⓘ
- The sender is not authorized to use this domain and appears to be spoofed.
- No malicious links detected.
- No attachments to scan.

Analysis ⌄

Threat Protection
Safe ⓘ
- The sender is authenticated and signed.
- No malicious links detected.
- No attachments to scan.

Analysis ⌄

Threat Protection
Malicious ⓘ
- The sender is authenticated and signed.
- No malicious links detected.
- Malicious files detected.
